DETAILED ACTION

Drawings

1. The replacement drawings were received on August 1, 2005. These drawings are approved.

Allowable Subject Matter

2. Claim 1-6, 19 and 20 are allowed over the prior art of record.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance is applicant's amendment which added the limitation to independent claim 1, "an oxide layer deposited upon the carrier substrate so as to fill any gaps between each of the at least two substrates and the pocket." The limitation overcame the rejection over the Jacobsen reference. Jacobsen teaches a donor substrate having a plurality of blocks comprising functional components (substrates) transferred and bonded into recessed regions (patterned pockets) on a to a carrier substrate by fluidic self-assembly. In the Jacobsen reference, the blocks protrude above the surface of the donor substrate (See figure 7B). The amendment to the claims overcame the rejection, because although there is a planarization step disclosed in Jacobsen (See Figure 8G), this occurs after the functional components have been transferred from the donor substrate to the receiving (carrier) substrate and are no longer protruding above the surface of the substrate. Consequently, the prior art fails to teach or suggest the all the limitations of the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
